PRODUCT REQUIREMENTS DOCUMENT

VitaFit Momentum

Rewards & Community Challenges

Status	Draft — For Review
Owner	Product Team
Date	April 2026
Version	v1.0

1. Description — What is it?

VitaFit Momentum is a feature set designed to increase repeat usage, sustained motivation, and emotional connection within the VitaFit platform. It comprises two interconnected features that together transform VitaFit from a passive on-demand fitness library into a habit-forming, community-led experience.

Feature 1 — Gamification & Rewards System

A points, streaks, badges, and rewards system that encourages users to complete sessions consistently. Users earn VitaPoints for attending classes, achieving weekly goals, exploring new workout types, and engaging with instructors.

Feature 2 — Community Challenges

Time-bound group challenges that allow users to pursue shared fitness goals alongside friends, instructors, or the wider VitaFit community. These challenges foster accountability, friendly competition, and a stronger sense of belonging.

2. Problem — What problem is this solving?

VitaFit is experiencing a decline in repeat usage and long-term retention because users are losing motivation after their initial onboarding. The core problems are:

- Users lack sufficient reason to return regularly once the novelty of sign-up fades.
- The existing experience feels transactional and individual rather than social or emotionally rewarding.
- Users do not feel personally connected to instructors, reducing loyalty to specific classes or programmes.

- There is no accountability mechanism — users can disengage without any social or product-level consequence.

VitaFit needs to create stronger habit loops, genuine emotional connection, and community-driven motivation to convert casual users into long-term, active members.

3. Why — How do we know this is a real problem?

The problem is evidenced by a range of product and behavioural data signals. The table below maps each signal to its implication for the platform:

Data Signal	What it Suggests
Drop in D7 and D30 retention	Users are not forming a repeat habit after sign-up
High session browsing but low completion	Users are interested but lack motivation to start or finish
Low repeat attendance with the same instructor	Weak instructor-user connection reduces loyalty
Declining weekly active users	Users are not returning consistently over time
Higher retention among live class users vs. on-demand	Social presence and instructor interaction drive engagement
Low community or sharing activity	Users are not forming social accountability loops

A key behavioural insight is that users who feel recognised, rewarded, or socially connected are significantly more likely to return and build a durable fitness habit.

4. Success — How do we know if we have solved it?

North Star Metric

Increase the number of users completing two or more VitaFit sessions per week.

Primary Success Metrics

Metric	Target
Weekly active users completing sessions	+15%
Average sessions per user per week	+20%

Metric	Target
D30 retention rate	+10%
Repeat usage within 7 days of first session	+15%
Challenge participation rate	25% of active users join at least one challenge
Challenge completion rate	40% of participants complete a challenge
Instructor follow or favourite rate	+20%

Secondary Metrics

Metric	Target
Reward redemption rate	15–20% of eligible users redeem rewards
Streak continuation rate	Week-on-week workout consistency improvement
Social shares or friend invites	+10%
Push notification click-through rate	+10% for challenge and reward messages

5. Audience — Who are we building for?

Primary Audience — Busy Working Professionals (22–40)

These users want flexible fitness options but struggle with consistency. They are likely to:

- Prefer short, convenient sessions that fit around work and family commitments.
- Respond to progress tracking, social proof, and tangible rewards.
- Need external motivation and accountability to maintain a habit.
- Engage with challenges when they feel achievable rather than intimidating.

Secondary Audience — Gen Z & Younger Fitness Users (18–25)

These users are native to social and community-driven digital experiences. They are likely to:

- Respond enthusiastically to leaderboards, badges, and shareable achievements.
- Follow specific instructors or fitness personalities and seek personalised interaction.
- Join challenges with friends and thrive in competitive social contexts.
- Expect interactive and personalised digital experiences as a baseline standard.

6. What — Roughly, what does this look like in the product?

Feature 1 — Gamification & Rewards System

Users earn VitaPoints for meaningful activity across the app. The table below outlines the core earning structure:

Action	Reward
Complete a workout session	+50 VitaPoints
Complete 3 sessions in a week	Weekly Consistency Badge
Try a new workout category	+25 VitaPoints
Attend a live session	+75 VitaPoints
Complete a community challenge	Challenge Badge + bonus points
Follow an instructor	+10 VitaPoints
Maintain a 7-day streak	Streak Badge

The rewards system surfaces across multiple product touchpoints:

- Home screen — progress card showing weekly goal, streak count, and current points.
- Post-session screen — points earned, badge progress, and a recommended next action.
- Profile screen — badges, levels, streaks, and rewards wallet.
- Instructor pages — bonus points for joining instructor-led sessions.
- Push and email notifications — streak reminders and reward unlock prompts.

Example copy (post-session): "Great work — you earned 50 VitaPoints. You are one session away from your Weekly Warrior badge."

Feature 2 — Community Challenges

Users can join themed fitness challenges with other users. Example challenges include:

Challenge	Description
7-Day Morning Yoga Reset	Complete one yoga session every morning for 7 days
10K Zumba Burn	Burn a target number of calories through Zumba sessions
Team Step & Sweat Challenge	Join a team and complete workouts together
Instructor's Weekly Challenge	Complete a curated programme led by a VitaFit instructor
Beginner Confidence Challenge	Complete 5 beginner-friendly sessions in 14 days

Community Challenges appear across these screens:

- Home screen — featured challenge card.
- Explore tab — challenge discovery area.
- Instructor profile — instructor-led challenge listings.

- Challenge detail page — goal, duration, participants, progress, leaderboard, and rewards.
- Community feed — milestones, instructor messages, and user shout-outs.

To strengthen the instructor relationship, each challenge includes:

- An instructor welcome video and weekly check-in message.
- Live Q&A sessions or short motivational clips.
- Instructor shout-outs for engaged participants.
- Instructor-curated session playlists tailored to the challenge goal.

7. How — What is the experiment plan?

Hypotheses

Hypothesis 1 — Users who receive points, badges, and streak feedback after completing sessions will attend more weekly sessions than users who do not.

Hypothesis 2 — Users who join community challenges will show higher repeat usage and improved retention compared with users relying solely on standard on-demand sessions.

Phase 1 — MVP Build

The MVP will launch with a focused, lean feature set to test the core behavioural hypothesis before investing in complexity:

- Basic VitaPoints system and weekly streaks.
- Three starter badges (e.g., First Session, Weekly Warrior, Explorer).
- Three community challenges with a leaderboard and progress screen.
- Instructor welcome message for each challenge.
- Post-session reward confirmation screen.

A reward marketplace will not be included in the MVP. The first version focuses purely on motivation and habit formation.

Phase 2 — Controlled Beta Test (4 Weeks)

The MVP will be validated via a structured A/B test to isolate the impact of each feature:

Group	Experience
Control Group	Existing VitaFit experience — no changes
Test Group A	Gamification only (VitaPoints, streaks, badges)
Test Group B	Community Challenges only
Test Group C	Gamification + Community Challenges combined

This structure allows the team to determine whether rewards, community, or their combination produces the strongest impact on repeat usage.

Phase 3 — Measure & Iterate

During the beta period, the following signals will be tracked continuously:

- Session frequency and weekly active users.
- Challenge join rate and completion rate.
- D7 and D30 retention.
- Instructor follow rate and notification engagement.
- Reward engagement and streak continuation rate.
- In-app survey responses (e.g., "What helped you stay motivated this week?").

Phase 4 — Scale

If the MVP demonstrates positive results against the defined success metrics, the roadmap expands to include:

- More instructor-led challenges and themed seasonal campaigns.
- Friend invite flows and team-based competitions.
- A full reward marketplace for point redemption.
- Personalised challenge recommendations driven by user behaviour.

Final Recommendation

The recommended MVP is to launch Gamification and Community Challenges together. The two features are mutually reinforcing:

- Gamification gives users a compelling personal reason to return.
- Community Challenges give users someone — and something — to return for.
- Instructor-led challenges create the personal connection VitaFit is currently missing.

Together, these features position VitaFit to evolve from a content-based fitness app into a habit-forming, community-led platform — turning casual browsers into motivated, loyal members.
